

Prolonged heat dome expected to spread

Scorching temperatures brought on by a “heat dome” have taxed the Texas power grid and threaten to bring record highs to the state before they are expected to expand to other parts of the U.S. during the coming week, putting even more people at risk.

Heating up the dome

1. High pressure system develops
2. Compressed air below heats up under weight of system
3. High pressure moves jet stream with drier, cooler air farther north
4. Hot, humid air from Gulf of Mexico circulates around dome farther inland

Fossil-Fuelled Summers

Hideous heat domes,
Desiccating droughts,
Gasping globe,
Forever firestorms,
Cremated creatures,
Still secrecy!

Breadbaskets barren,
Oily coffers overflowing,
AI awaiting,
Lotta SpaceX launchpads,
Eight billion experts . . .
Summer's Agony Age,
Doom,
Death!

Childhood summers,
Garden's growing
Delectable dill
Perfect plum dances,
Plenty, joy, warmth,
Tremendous tomorrows!
